

# Getting Your Device Ready

## Preparing the device

The following process will support you to prepare your child's device for school. It will guide you to: create an Apple ID, and install the apps that your child will need for learning. This process will ensure the device works both at home and school.

If your device is brand new please follow the instructions on the screen to access your iPad. It is very important that you DON'T add a passcode as there may be times when a staff member may need to access your child's device for technical assistance.

## Set up - Out of the box

1. Create an Apple ID and password. We recommend also setting up Family Sharing.
2. Check if you have iTunes U installed. If not open the App Store and install it. You will need an internet connection and your Apple ID.
3. In iTunes U tap on the '+' sign in the top left hand corner and select 'enrol in a course'.
4. When prompted enter the course code:

**ECZ-BBL-YFL**

Create your child's Apple ID (Section 4)

Install the core list of apps and year level specific apps (Section 5 - 2019 App List)

This course also contains other important information for students and families, including our vision, iPad requirements, conditions of use, cybersafety and digital citizenship and general care advice.

**Congratulations your iPad is now ready for school.**
